Object	Data Type	Field Name	API Name
Account	Lookup(Contact)	Primary Contact	Primary_Contact__c
Contact	Checkbox	Is Primary	Is_Primary__c

Read the code given below:

Code Snippet 1:

```
//set Primary Contact on Account
trigger ComputePrimaryContactTrigger on Account (before insert, before update, before delete,
after insert, after update, after delete, after undelete) {
   for(Account acc : trigger.old){
      if(acc.Id != null) {
         Contact con = [select id
                  from contact
                  where AccountId =: acc.Id
                  and is_Primary__c = true
                  LIMIT 1];
         acc.Primary_Contact__c = con.Id;
         update acc;
      }
   }
}
```

Code Snippet 2:

```
//only one contact can be primary for an account at a time
trigger UniqueContactOnAccountTrigger on Contact (before insert, before update, before delete) {
   for(Contact c : trigger.new){
      if(c.is_Primary__c){
         Account acc = [select id
                  from Account
                  where Id =: c.AccountId][0];
         acc.Primary_Contact__c = c.Id;
```

```
        update acc;
        list<Contact> cList = [Select id
                               from Contact
                               where is_Primary__c = true
                               and AccountId =: c.AccountId];
        for(Contact c1 : cList){
           c1.Is_Primary__c = false;
        }
        update cList;
      }
   }
}
```

Code Snippet 3

```
@isTest
public class PrimaryContactTest {
   public static testMethod void primaryContactTest(){
      Account acc = new Account();
      acc.Name = 'Test account';
      insert acc;
      Contact con = new Contact();
      con.LastName = 'A1';
      con.AccountId = acc.Id;
      insert con;
      Contact con1 = new Contact();
      con1.LastName = 'A2';
      con1.AccountId = acc.Id;
      insert con1;
      Contact con2 = new Contact();
      con2.LastName = 'A3';
      con2.AccountId = acc.Id;
```

```
        con2.Is_Primary__c = true;
        insert con2;

        Account acc2 = [select id, Primary_contact__c
                        from Account
                        where Id =: acc.Id];

        System.assertEquals(acc2.Primary_contact__c, con2.Id);

        list<Contact> conList = new list<Contact>();
        con1.Is_Primary__c = true;
        con2.Is_Primary__c = true;
        conList.add(con1);
        conList.add(con2);
        update conList;

        Account acc1 = [select id, Primary_contact__c
                        from Account
                        where Id =: acc.Id];

        System.assertEquals(acc1.Primary_contact__c, con2.Id);

    }
}
